

Appendix B

Results of the GeoCLEF Tracks

Prepared by:

Giorgio Maria Di Nunzio and Nicola Ferro

**Department of Information Engineering
University of Padua**

Introduction

Results for CLEF 2005 GeoCLEF Tracks

The following pages contain the results for all valid experiments for the GeoCLEF bilingual and monolingual tasks that were officially submitted to the organizers of the CLEF 2005 campaign.

This document is divided in three main parts:

1. List of submitted runs
2. Overview graphs
3. Individual results

1. List of submitted runs

This section gives a listing of all runs and their characteristics:

- Participant:** the name of the participant responsible for run.
Country: country of participant.
Run Tag unique identifier for each experiment.
Task: track/task to which the experiment belongs.
Topic language: language of the topics used to create the experiment (ISO identifiers for language).
Query type: identifies the parts of the topics used to create the experiment (T = title, D = Description, N = Narrative).
Run Type: type of experiment (automatic/manual).
Pool: specifies if experiment was used for relevance assessment pooling.

2. Overview Graphs

For each track/task two front-back pages are produced to compare the top experiments. The first page shows the best entries only for the mandatory title + description (TD) automatic run of at most top five participant. The second page shows the best entries among all runs (T/TD/TDN, automatic/manual) submitted of at most top five participants.

The two pages contain the following information:

- Front
 - Average precision vs Recall plot
 - R-Precision vs number of retrieved documents plot
- Back
 - Comparison to median plot
 - A table with best/median/worst performance figures for each topic

3. Individual Results

This section provides the individual results for each official experiments. Each experiment is presented in one page containing a set of tables and graphs:

- Overall statistics and info
- Interpolated recall vs Precision averages
- Document cutoff levels vs Precision at DCL
- Individual topic results

Average precision (non-interpolated) for all relevant documents (averaged over queries)
 22.53

Docs Cutoff Levels	Precision at DCL (%)
5 docs	44.00
10 docs	35.20
15 docs	31.20
20 docs	26.60
30 docs	22.00
100 docs	11.72
200 docs	7.48
500 docs	3.72
1000 docs	1.87

R-Precision (precision after R document retrieved, where R = Relevant retrieved)
 27.50

Precision averages (%) for individual queries
