Measuring the contribution of Word Sense Disambiguation for QA

- Provide English documents and queries (plus Spanish queries) with automatically annotated word senses (WordNet)
  - News corpora only: LA94 GH95
- Sense information added to all content words
  - Lemma
  - Part of speech
  - Weight of each sense in WordNet 1.6
- XML with DTD for documents and queries
- Significant effort (100Mword corpus), shared with the Robust-WSD task

Measuring the contribution of Word Sense Disambiguation for QA

- Participants explore how the word senses (plus the semantic information in wordnets) can be used in QA

- Relevant tasks:
  - ES2ENG and EN2EN ($QA_{WSD}$ participants only)
  - 2 runs, with and without WSD

- Reduced interest, one participant only
  - Low performance with and without WSD
